Geneva, 8th may 2012

To whom it may concern.

Evgeny Zorin has been working as Software Engineer at CERN, under my supervision from August 2008 until now, being associate member of the Industrial Controls group of the Engineering department.

During this period he was mainly in charge of the development and support of the LINCA4 emittance scanner control system. The project consisted in remotely controlling an accelerator front-end, hosting various devices used to map the beam profile.

In parallel he has contributed to the upgrade of the Magnet Test Benches control system, taking care of the renovation of the power supply control application integrating to the standard communication layers used in the accelerators domain at CERN.

In both cases Evgeny has show not only his technical competencies, but his devotion to the work, offering his availability also outside working hours.

I think that Evgeny has been really a useful collaborator and my experience of working with him is definitively positive.

If you'd like to discuss his attributes in more detail, please don't hesitate to contact me.

Sincerely,

Dr. Alessandro Raimondo
